Overview

Vendor Attribute Addon for Magento 2 is basically an admin panel extension and provides a facility to extract important information from the vendor about his/her profile as per website admin's requirements.

The Vendor Attributes are specifically used to provide the website admin a feature with which various details can be dragged out from the vendor. These details may include Pan Card Number, some Legal Information or any other information necessary for the website admin to have.

This extension is dependent on the CedCommerce Multi-Vendor Marketplace and thus, CedCommerce Multi-Vendor Marketplace should be installed prior to Vendor Attribute Addon to ensure its proper working.

Enable/Disable Vendor Attribute

To enable the Vendor Attribute Addon go to **Marketplace > Vendor Configuration**, just select "Yes" in the "Enable Vendor Attribute System" dropdown and click on "Save Config" button to save the configuration settings. Selecting "No" will disable the Vendor Attribute Addon and its features won't show up on frontend.

General	
Enable Vendor MultiShipping System	Yes
Enable Vendor Attribute System	Yes [WEBSITE]
Enable Vendor System	Yes [WEBSITE]

Manage Vendor Attributes

From the admin panel go to the menu and select **Marketplace > Vendor Attributes**. From here the admin can edit new attribute's information as well as he/she can create a new vendor attribute. The already created vendor attributes are the system attributes that can't be deleted.

Add Vendor Attribute

Admin can create new vendor attribute by clicking on **“Add Vendor Attribute”** button.

a) Properties Tab

It shows all the settings to manage the new attribute information.

The screenshot shows the 'Attribute Properties' form. On the left, there is a sidebar with 'ATTRIBUTE INFORMATION' containing 'Properties', 'Manage Labels', and 'Storefront Properties'. The main form has the following fields:

- Default label ***: A text input field.
- Attribute Code ***: A text input field with a callout: "Must enter unique attribute code". Below it, a note says: "This is used internally. Make sure you don't use spaces or more than 30 sy".
- Vendor Input Type for Store Owner**: A dropdown menu currently set to "Text Field".
- Values Required**: A dropdown menu currently set to "No". A callout points to it: "Default value of Vendor Attribute".
- Default Value**: A text input field.
- Default Value**: A dropdown menu currently set to "No". A callout points to it: "Set yes to accept unique values".
- Default Value**: A text input field with a calendar icon.
- Default Value**: A text input field.

A callout on the left sidebar points to 'Manage Labels' and says: "Click here to manage the label options".

Attribute Code - Vendor attribute code must be unique. It cannot be updated later.

Input type - The type of the vendor attribute can be set as text/dropdown/multiselect/textarea. It cannot be updated later.

Default Value - Some default value can be provided here so that, in case no option value has been provided then this value can be used.

Unique Value - If set to yes, it won't allow duplicate values to be entered.

Value Required - If set to yes, it will become required field.

Validation for Store Owner - This is used to provide validations to the attribute value being entered, for example, it can be only numbers or characters, etc.

Used in Vendor Profile Edit Form - If set to yes, it will appear in the Vendor Profile Page at Frontend.

Position - This is used to set some sort order i.e. the position where it should be shown.

b) Manage Label/Options

Admin can add the label for this attribute by clicking on “**Manage Label/Options**”. If the attribute is of dropdown type or multi-select type then there will be a provision to add various options for that attribute.

The screenshot shows the 'Manage Labels' section in the admin panel. On the left, there is a sidebar with 'ATTRIBUTE INFORMATION' and 'Manage Labels' highlighted. The main content area is titled 'Manage Titles (Size, Color, etc.)' and contains a table with two columns: 'Default Store View' and 'Store'. A callout bubble points to the 'Default Store View' input field with the text 'Here label of each store can be set'.

c) Manage Attribute Group

If some attributes have to be grouped in such a manner that they should belong only to that particular group then, Manage Attribute Group can be used. Groups are used to categorize the attributes. The attributes belonging to any group will be listed only in that particular group on the Vendor Profile page, both at frontend and admin panel.

By Clicking on the save button all the attribute data will be saved and a new attribute will be created in the Magento 2.

The frontend view of the Vendor Panel will look as shown below, after the Vendor Attributes have been added and group has been created.
